💻 Project

Custom Map Coordinates - WordPress Plugin

This plugin allows to use shortcode, Gutenberg block, or Elementor widget to display Google Maps on any page

Stack used - WordPress, PHP, HTML, CSS, Bootstrap, jQuery, ReactJS

Live Demo: https://wordpress.org/plugins/custom-map-coord

Khanepani Billing System - Core PHP

A web-based Water Billing System designed for Panwara, Dharan. This application is designed to record user information, meter readings, and facilitate automatic calculations. It incorporates discounts or fines based on the timing of bill payments. It also has a function to print receipts, see payment history and any client information and their remaining payments.

Stack used - PHP, MySQL, HTML, CSS, jQuery

Live Demo: https://github.com/shahmanish877/Khanepani-system

Keller International LLC - Custom WP Theme

This WordPress website was made using a custom theme without any page builder plugin and is responsive across all devices. It also has multiple custom post types and custom taxonomies. The navigation menu was created without any plugin and by solely using a custom walker. It's really fast, scoring between 95 to 100 in Google Pagespeed, and maintains error-free status in the search console.

Stack used - WordPress, PHP, HTML, CSS, jQuery

Live Demo: https://www.kellerexecutivesearch.com/
