-

Projects

HYWD Tools Manager

It provides a central location for administrators to view the status of multiple plugins, including whether they are installed or not, and the state of their licenses. Additionally, it allows for easy license management by providing fields to enter and activate license keys directly from the dashboard.

Stack used: WordPress, PHP, HTML, CSS, Bootstrap, jQuery, REST API, Ajax

Live Demo: <https://wordpress.org/plugins/hywd-tools-manager/>

Formidable Divi Module

This plugin registers a new module in Divi page builder “Formidable” which allows to easily select any forms and also allows to enable form title, or description.

Stack used: WordPress, PHP, ReactJS

Live Demo: <https://wordpress.org/plugins/formidable-divi-module/>

Khanepani Billing System - Core PHP

A web-based Water Billing System designed for Panwara, Dharan. This application is designed to record user information, meter readings, and facilitate automatic calculations. It incorporates discounts or fines based on the timing of bill payments. It also has a function to print receipts, see payment history and any client information and their remaining payments.

Stack used: PHP, MySQL, HTML, CSS, jQuery

Live Demo: <https://github.com/shahmanish877/Khanepani-system>

Keller International LLC - Custom WP Theme

This WordPress website was made using a custom theme without any page builder plugin and is responsive across all devices. It also has multiple custom post types and custom taxonomies. The navigation menu was created without any plugin and by solely using a custom walker. It's really fast, scoring between 95 to 100 in Google Pagespeed, and maintains error-free status in the search console.

Stack used: WordPress, PHP, HTML, CSS, jQuery
